

Data Science & Data Analytics

2-Week Intensive Training Program

Course Overview

A hands-on program using **real-world datasets** to master data cleaning, visualization, predictive analytics, and dashboarding with **Power BI/Tableau**.

Duration: 2 Weeks

Format: Online/physical (Labs + Case Studies + Tool Demos)

Who Should Attend?

Admin Staff – Streamline data workflows.

Analysts & HR – Turn data into actionable insights.

Project Managers – Make data-driven decisions.

Key Learning Outcomes

- **Data Cleaning & Visualization** – Prep and explore datasets effectively.
- **Predictive Analytics** – Regression, clustering, and forecasting.
- **SQL & Python for Analysis** – Query databases and automate tasks.
- **Dashboarding (Power BI/Tableau)** – Build interactive reports.
- **Data-Driven Decision Making** – Measure impact and justify actions.

Sample Modules

Week 1: Data Wrangling & Explanatory Analysis

- Data cleaning (missing values, outliers, transformations).
- Exploratory Data Analysis (EDA) with Python/Pandas.
- Visualization best practices (Matplotlib, Seaborn).

Week 2: Advanced Analytics & Reporting

Hands-On Labs:

- Predictive modeling (Scikit-learn).
- SQL for data extraction (JOINS, subqueries).
- Dashboard design (Power BI/Tableau).
- Presenting insights to stakeholders.

Training Methods

- **Real-World Datasets:** Finance, HR, sales, or operations.
- **Tool Demos:** Step-by-step Power BI/Tableau guides.
- **Case Study:** Optimizing HR attrition rates with data.

Why This Course?

- **No Fluff:** Focus on practical, job-ready skills.
- **Tool-Agnostic:** Compare Power BI vs. Tableau.
- **From Excel to AI:** Scale your analytics maturity.
